

Forklift Fork Positioner

Fork Positioner for Forklift - A fork positioner is an apparatus constructed out of high quality materials designed to withstand the most challenging procedures and work environments. This particular piece of equipment can enable drivers to be able to maneuver the forks hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate lifting and position in a quicker and much more effective manner.

The only one of its kind fork pocket design could enable the one operating it to be able to safely sway the unit's forks without any worry of damaging the positioning cylinders. This can allow the worker the alternative to either execute independent or simultaneous blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into fork positioners on available units.
